Chapter 1: Family

Family Structure: Families consist (కలిగి ఉంటాయి) of grandparents, parents, siblings (brothers or sisters), and sometimes pets.
Roles and Responsibilities: Each family member contributes (gives or helps) to the household (కుటుంబము) through shared tasks (works).
Love and Care: Family members love, care for, and support each other.
Professions (jobs) and Needs: People in a village have various professions (work to get money or a paid job) that fulfill (satisfy) community (a group of people living in the same place) needs.
Child Labor: Children should be in school, not working. Education is a right for all children.
Good Practices and Resemblance: Families often share similar practices and physical features.
Diversity (many types) and Uniqueness (special things): We should respect differences in appearance (looks) and treat everyone with kindness.

Remember: Families are important, and everyone has a role to play. Children should be protected and educated. We should appreciate our similarities and differences, and always treat others with respect.

Chapter 2: Plants around Us

This chapter focuses (pay attention to) on introducing (తెలిసేలా చెయ్యడం) students to the different parts of plants and their functions. The key points include (what is there inside):

Plant Parts and Functions: Plants have roots, stems, leaves, flowers, and fruits. Roots absorb (పీల్చుకోవడం) water and nutrients (food) from the soil, stems transport these resources (కావలసిన) and support the plant, and leaves produce food through photosynthesis (use light and carbon dioxide from air to make food). Flowers are involved (to take part in) in reproduction (give birth to fruits, seeds and then to other plants), and fruits develop (to grow) from flowers and contain seeds.

Types of Plants: Plants are classified into different (many) types based on their size and stem characteristics (లక్షణాలు): trees have strong, woody (చెక్క) stems (trunks), shrubs have smaller, woody stems, herbs have soft, green stems, climbers grow with support, and creepers grow along the ground.

Leaf Diversity: Leaves come in various (రకరకాల) shapes, sizes, colors, and smells, and they are crucial (important) for producing food for the plant.

Parts of a leaf:

Leaf Margin: This refers to the edge or boundary of the leaf. It can have various shapes, such as smooth, toothed, or lobed.

Veins: These are the network (connection) of lines visible on the leaf surface. They transport (send) water and nutrients (food) throughout (అంత) the leaf.

Petiole: This is the stalk (కొమ్మ) that attaches the leaf to the stem. It acts as a channel (మార్గం) for the flow of substances (పదార్థాలు) between the leaf and the rest of the plant.

Apex: This is the tip or pointed end of the leaf.

Uses of Plants: Plants provide us with food, oxygen, medicine, and materials (పదార్థాలు) for various (different or many) purposes (ప్రయోజనం). They also help prevent soil erosion (prevent/stop soil from going away due to rain, floods etc.) and maintain ecological (environment) balance.

Plant Care: Plants need water, sunlight, and nutrients to grow and stay healthy. It is important to care for plants and protect them.

The chapter emphasizes (focuses or నొక్కిచెప్పండం) the importance of plants in our lives and encourages students to observe and appreciate the diversity (భిన్నత్వం or రకరకాల or many kinds) of plants in their surroundings. It also promotes (support) environmental awareness (జ్ఞానం) and responsible (బాధ్యత) behavior (ప్రవర్తన) towards plants.

Chapter 3: Animals around Us

This chapter introduces (పరిచయం or to tell) students to the diverse (many kinds) world of animals and their characteristics (features, qualities). Key points include:

Animal Classification (types): Animals are categorized (different types) into domestic (cows, dogs, cats), wild (lions, tigers, bears), and pet animals (cats, dogs, parrots). Domestic animals live with us and provide (give) benefits (uses) like milk, meat, and transportation. Wild animals live in forests.
Animal Movement: Animals move in various ways: walking, crawling, jumping, flying, and swimming. They use their legs, wings, tails, fins, etc., to navigate their environments.
Animal Habitats (places where they live): Animals reside (live) in different places: on land (terrestrial), in water (aquatic), and both (amphibians). Birds typically live in nests, while other animals have burrows, dens, or specific shelters.
Animal Diets (what they eat): Animals have diverse diets: herbivores eat plants (cows, elephants), carnivores eat meat (tigers, lions), omnivores eat both (bears, crows), and scavengers consume (eat) dead animals (vultures, crows).

Predators are animals that hunt and kill other animals for food. They are typically (normally) carnivores or omnivores. Examples of predators include:

Lions
Tigers
Wolves
Sharks
Eagles
Snakes

Prey are the animals that predators hunt and eat. They can be herbivores, carnivores, or omnivores. Examples of prey include:

Deer
Rabbits
Fish
Mice
Insects
Birds

Animal Communication (how they talk to each other): Animals communicate (talk) through sounds (barking, chirping, roaring) and other signals. They use these to interact (to talk) , warn others, and defend (protect) their territories.

Puppy/Dog: Barks
Cat: Meows
Crow: Caws

Tiger: Roars
Cricket: Chirps
Horse: Neighs
Pig: Grunts
Donkey: Brays
Goat: Bleats
Cuckoo: Coos

Animal Protection: The chapter emphasizes (focuses) the importance of protecting and caring for animals, highlighting (focusing) their role in the environment and our responsibility towards them.

Overall, Chapter 3 aims (goal) to foster (help) understanding and appreciation for animals, encouraging (support) students to observe (గమనించండం) and learn about the creatures (జీవులు) around them. It also promotes (to help) empathy (care) and responsible behavior towards animals.

Chapter 4: Our Body

Key Points to Remember from this Chapter:

- **Body Parts and their Functions:** Our body consists of different parts like the head, trunk, and limbs (hands and legs), each with specific functions. We use our eyes to see, nose to smell and breathe, mouth to eat and talk, and ears to hear.
    - Names of fingers - thumb (బొటన), index (చూపుడు), middle (మధ్య), ring (ఉంగరం), little (చిటికెన)
- **Five Senses:** We have five senses (sight/vision/seeing, smell, taste, touch, and hearing) that help us learn about and interact with the world around us.
- **Good and Bad Touch:** It's important to understand the difference between good and bad touch. Good touch makes us feel safe and cared for, while bad touch makes us uncomfortable, scared, or sad. Private parts should never be touched by others. These are:
    - Lips, Chest, Seat, Between the legs.
- **Protecting Ourselves:** If someone makes us uncomfortable with bad touch, we should say "NO" loudly, run away, and tell a trusted adult immediately. It's not our fault, and seeking help is crucial.
    - **Always share with your parents** details about any problems you may face at home or outside the home, even if you think you or someone else has done something wrong. Because only parents love you the most and will always want to take care of you.
        - If somebody says or threatens you, “Don’t tell this to your parents!”, then you should definitely come and tell your parents about it.
    - **Child Helpline:** In emergencies, children can call the national helpline CHILD LINE 1098 for assistance in India. In the USA, children can call 911.
- **Healthy Habits:** Maintaining a healthy body requires good habits like brushing teeth, washing hands, eating fruits and vegetables, and exercising regularly. We should always stay clean and dress nicely.
- **People with Disabilities:** We should be kind and inclusive to people with disabilities, offering help when needed and avoiding nicknames.

Remember, our body is precious, and we should take care of it and protect it from harm.

Chapter 5: Food

This chapter emphasizes the importance of food for energy, growth, and overall health.

- **Food's Necessity:** Food is crucial for survival, providing energy for daily activities, growth, and staying alive.
- **Diverse Food Sources:** We obtain food from both plants (fruits, vegetables, grains, seeds) and animals (meat, milk, eggs).
    - **Vegetables:**
        - **Leafy vegetables:** spinach, curry leaves, amaranthus, drumstick leaves, cabbage etc.
        - **Fruits that are used like vegetables:** tomato and cucumber
        - **Other vegetables:** brinjal, ladies finger, bottle gourd, drumstick, beetroot, cauliflower, carrot, radish, potato, onion, cucumber.
    - **Fruits:** Apples, oranges, bananas, grapes, mangoes, berries (strawberries, blueberries, raspberries), melons (watermelon, cantaloupe), avocados.
    - **Seeds:** Seeds are the reproductive units of a plant and some seeds can be eaten directly or used for planting.
        - Sunflower seeds, pumpkin seeds, sesame seeds, chia seeds, flax seeds.
        - Nuts are a type of seed, but not all seeds are nuts
            - Nuts that are seeds: almonds, peanuts, cashews, pecans, walnuts, peanuts
            - True nuts (which are both the fruit and seed in one package): hazelnuts, chestnuts, acorns
    - **Grains:** Grains are a specific type of seed that comes from cereal grasses and are primarily used as a staple food.
        - Rice, wheat, corn, oats, barley, quinoa, rye, millet.
    - **Food from animals**
        - **Meat:** Chicken, lamb, fish.
        - **Dairy:** Milk, cheese, yogurt, butter.
        - **Eggs:** Chicken eggs, duck eggs.
        - **Honey:** Produced by bees.
- **Balanced Diet:** A balanced diet includes various food groups to ensure adequate nutrient intake.
- **Age-Specific Needs:** Dietary needs vary with age. Infants require soft or liquid foods, while the elderly may need softer options due to dental issues.
- **Cooking and Food Safety:** Cooking enhances food's digestibility, taste, and safety. Proper hygiene, like washing hands and produce, is essential to prevent illness.
- **Food Variety and Preparation:** Food can be prepared in diverse ways (boiling, frying, steaming, roasting). Different cultures have unique cuisines and cooking methods.
- **Mindful Eating Habits:** Good food habits include eating slowly, chewing well, and avoiding wastage.

This chapter highlights the significance of food for our well-being and encourages healthy eating practices and appreciation for diverse food sources.

Chapter 6: Water

This chapter emphasizes the importance of water, its uses, sources, water cycle, scarcity, and the need for conservation.

- **Water is essential for all life** and has various uses, including drinking, cooking, cleaning, construction, agriculture, and aquaculture.
- **Water comes from both natural sources** (rain, oceans, rivers, lakes, ponds and springs) **and man-made sources** (dam reservoirs, wells, canals).
    - A spring is a natural water resource that occurs when groundwater flows onto the Earth's surface.
    - About 71% (71 parts out of 100) of earth is oceans. Ocean water is salty and can not be used for drinking directly.
- **Water Cycle:** The water cycle is the continuous process of water changing states (liquid/gas/solid like ice) and moving around the Earth. It includes the following stages:
    - **Evaporation:** Water changes from a liquid to a gas (water vapor) due to the sun's heat. Water from various sources like ponds, tanks, rivers, and seas evaporates into the air.
    - **Condensation:** As water vapor rises, it cools and changes back into tiny water droplets, forming clouds.
    - **Precipitation:** When the water droplets in clouds become heavy enough, they fall back to the Earth's surface as rain, snow, or sleet.
    - **Collection:** The water that falls back to Earth collects in different bodies of water (oceans, rivers etc.), and the cycle begins again.

      This continuous cycle ensures the availability of water for various purposes and sustains life on Earth.

- **Water scarcity is a major issue**, and people in many areas face challenges accessing clean water. It is crucial to conserve water and avoid wastage.
- **Protected water sources provide clean and purified drinking water**, which is essential for preventing diseases.
- **Water can be polluted by human activities**, so it's important to drink clean, purified water. Boiling, filtering, and purifying are common methods for making water safe to drink.
- **Saving water is crucial**, and individuals can take steps to reduce water wastage in daily activities. It's important to spread awareness about water conservation in communities.

Chapter 7: Shelter

This chapter highlights the importance of shelter for all living beings.

- **Shelter's Function:** Shelter provides protection from weather elements (heat, cold, rain), dust, and potential dangers like wild animals, or even from other people with bad intentions (like thieves).
    - The village Shani Shingnapur located in the state of Maharashtra in India is known for having no doors. The villagers believe that Lord Shani (Saturn) will safeguard them.
- **Evolution of Housing:** Human dwellings have evolved from caves to a variety of houses, reflecting changing needs and available resources.
- **Diverse Housing Types:** Houses come in various forms like huts, tiled houses, pucca houses (brick and cement), and apartments, influenced by factors like climate, materials, economics, and land availability.
- **Kutcha vs. Pucca Houses:** Kutcha houses (mud and straw) are less durable compared to pucca houses (brick, cement, and iron).
- **Essential Facilities:** Houses typically include living rooms, bedrooms, kitchens, and toilets for basic comfort and sanitation.
- **Cleanliness and Tidiness:** Maintaining a clean and organized house is vital for health and well-being.
- **Homelessness:** Some people lack homes. We should acknowledge the challenges faced by homeless people who lack proper shelter, and help them when we can.
- **Animal Shelters:** Animals also need shelter. They create homes like nests, burrows, dens, or utilize natural features like trees and caves.
    - **Insect Shelters:** Even insects create shelters like beehives and spider webs for protection and raising their young.
    - **Pets and Care:** Pets that live with humans require proper care, including food, water, and shelter.
- **Respect for All Shelters:** The chapter promotes empathy and respect for the shelters of all living beings, including animals and insects.

Shelter is a fundamental need for all living beings, and we should understand, appreciate, and be responsible towards various forms of shelter.

Chapter 8: Travel

This chapter explores the theme (topic) of travel, focusing on different modes (types)) of transportation, related infrastructure (all the things you need to do something), and the importance of traffic rules.

Importance of Transportation: Transportation is essential for connecting people and places, enabling access to education, work, healthcare, and other services.

Modes of Transport: People travel in various (different) ways, including by vehicles like buses, autos, cars, bikes, boats, ships, airplanes, and helicopters. We can categorize (dividing into types) vehicles based on the number of wheels and their operating environment (road, water, air). The mode of transportation often depends on the distance and availability.

- Different Vehicles and their Drivers: Vehicles have specific names for their drivers, like a pilot for an airplane, sailor for a boat, and captain for a ship.
- Fuel for Vehicles: Vehicles require fuel to operate, and there are different types of fuels available. The government is promoting the use of electric and CNG (a type of gas fuel) vehicles for environmental reasons.
- Vehicles for Specific Purposes: Some vehicles, like ambulances, fire engines, and road rollers, serve specific purposes beyond transportation.
- Evolution of Travel: In olden days people rode horses, donkeys, and used other modes of travel like bullock carts, horse carriages and palanquins (పల్లకి).

Roadways: Roads are categorized based on their construction materials, such as earthen, gravel, murrum, granite, tar, and concrete roads. Different roads vary (different) in quality and usage in different areas.

Road Safety and Traffic Rules: Traffic signals, signs, and road markings help regulate traffic flow and prevent accidents. It is crucial to follow these rules for safety.

- Pedestrians (those who are walking) cross the road on Zebra crossings.
- School zones are roads near schools where we should drive slowly, as some children might run suddenly on those roads.
- Red, yellow, and green traffic lights near junctions indicate vehicles to stop, get ready to stop, and to go.

Bus Stands, Railway Stations and Airports: Bus stands, railway stations and airports are places where buses, trains and airplanes stop for passengers (people who are travelling). These are public transportation facilities.

Responsible Travel: We should choose appropriate vehicles for different distances, follow traffic rules, and be considerate (care for) towards animals used for transportation.

Chapter 9: ~~Together with everyone~~ Communication

- **Communication** is the exchange of thoughts, feelings, and ideas. It can be verbal (spoken or written) or non-verbal (gestures, facial expressions, body language).
- **Direct communication** involves talking directly to someone, while **indirect communication** uses methods like phone calls, text messages, and emails.
    - It's important to use appropriate communication methods in different situations
- Communication has evolved from primitive methods (drumming, smoke signals) to modern digital methods (email, text messages, social media).
- **Animals communicate** using visual signals (body language), auditory signals (sounds), tactile signals (touch), and chemical signals (scent or smell).
    - Taste is not an obvious form of animal communication, but some animals like ants, bees, cats butterflies use taste to communicate
    - Some prey can recognize the scent of predators
    - **Examples of animal communication:** Bees perform a "waggle dance" to indicate food sources, dogs wag their tails when happy, and cats rub against objects to mark their scent.
        - Tigers are solitary animals that rely heavily on scent communication. By using a combination of urine spraying, scent rubbing, and feces deposition, they effectively mark their territory, convey crucial information to other tigers, and maintain order within their domain.

Chapter 10: Games and Recreation

Games and Sports: Children engage (take part in) in various (రకరకాల) games and sports like hide-and-seek, running, jumping, kho-kho, kabaddi, and kite flying. Games that can be played inside a house are called indoor games. Games played in the open fields or play grounds are known as outdoor games.

Indoor games	Outdoor games
Chess	Kabaddi
Carroms	Kho-kho
Asta Chemma	Cricket
Vaamana gunthalu (board game)	Volley ball
Skipping	Football (Soccer)
Hide and seek	Basket ball
Kaalla gajja	Tennis
Kothi kommachi	Tennicoit
Bongarala aata (Top)	Tag
Mukku gille aata	Freeze tag
Snakes and ladders	Edu penkulata (Seven stones, Lagori)
Puli-meka (Tiger-Sheep)	Tokkudu billa
Cards	Nela banda
Puzzles	Karra billa (Gilli-danda)
	Throw-ball

Benefits (advantages, good things we get): Games are not only fun but also essential (important) for physical (body) and mental (mind) well-being, promoting (supporting) fitness, teamwork (work as a team), and problem-solving skills (talent). Through games and sports children:

feel happy and gain (get) good health

develop (grow) (noble (good) qualities like cooperation (working together), unity (ఒకటిగా ఉండుట), mutual (each other or ఒకరికొకరు) understanding and leadership (guide others) qualities (లక్షణాలు)

will be ready to work with teams (a group of people forming one side like in games)

develop (grow) concentration (focus or దృష్టి) and patience (ఓపికా, work hard until you succeed or get success and not get irritated or worried if you are not able to do something)

develop life skills such as accepting failure (losing) as well as enjoying success (win)

wait for their turn.

In a team, all players play together to win the match. While playing games, sometimes you may win and sometimes you may lose. Do not get disappointed (sad) and don't fight when you lose the game! All players have to support and respect one another. This is called **team spirit**.

Traditional (Which were there from a long time) Games: Traditional games like Gilli-danda and Lagori (seven stones, edu penkulaata) are still popular and offer unique benefits.
Recreation: Recreation involves activities like singing, dancing, drawing, reading, watching TV and spending time with family and friends, contributing (giving) to relaxation and overall happiness.
Balance: It's crucial (important) to balance games, sports, and studies for a well-rounded life.
Respect and Sportsmanship: Always respect opponents (other team people) and play fairly (correctly), fostering (developing) a positive and enjoyable experience for everyone.

Remember: Games and recreation are vital (important) for a healthy and fulfilling life, promoting physical fitness, mental well-being, and social skills. It's essential (important) to maintain (keep) a balance between play and studies while upholding (supporting) values of respect and sportsmanship.

Chapter 11: This is the Way

This chapter focuses on **spatial awareness and navigation** and introduces concepts such as **directions, landmarks** (like a big tree or a school or a park)**, symbols, and maps**.

- **Directions and Locations:** The sun rises in the east and sets in the west, which helps us find the four cardinal directions **(north, south, east, west)**.

East	తూర్పు
West	పడమర
North	ఉత్తరం
South	దక్షిణం
North East	ఈశాన్యం
South East	ఆగ్నేయం
South West	నైరుతి
North West	వాయువ్యం
	(Clockwise - ఈ,ఆ,నై,వా)

    - We also learn about relative location (front, back, left, right) (related to some object that we are talking about - Eg: in front of our house, behind the railway station, above the house etc.).
- **Landmarks and Maps:** Landmarks are special places that help us know where we are and help us to navigate. Maps represent an area and use symbols to show landmarks, making it easier to find our way.
    - Maps show street names, location names, landmarks
- Corners are where two directions meet and boundaries are the edges of a place.
- In olden days people used to find their way using the stars and the sun. Nowadays, we use compasses and GPS (global positioning system).
