

25 'Oct '24

→ To describe a function, you need to say what the function takes as input / parameters / arguments, and what it does using those inputs and what does it return

→ In pycharm, from a function call if you want to go to the function definition, you can press 'Ctrl' and mouse click on function call (it turns blue)
— can do this with variables etc. as well

HW: Use Our Library Functions / PlayPianoNotes
our NotePlayingFunction

make a function call to play
another song — kundagoure song
type first cheranem

— x3 to play 3 times

(don't type/copy again)
